

HAEMATOLOGY /ONCOLOGY

With statistics showing that one in two Australians will be diagnosed with cancer by the age of 85 - no matter what clinical area you work in, chances are on each shift you will be caring for someone who has a history or a current cancer diagnosis. This full day workshop will provide you with the skills and knowledge to understand what this means for them and the individualised care you provide them with.

A hospital oncology unit often has specialist nurses trained to work in this area due to the complexity of the disease process, the impact of the diagnosis on an individual and their carers, and the available treatment options. During your day-to-day work you are likely to be faced with these same complexities but may lack specialty training to help you navigate the situation. The ANMF and HERC are pleased to be facilitating a workshop that has a jam-packed program to help you develop understanding of some common cancers, treatment options and the knowledge to equip you in providing confident patient-centred care to your clients.
