

As nurses and midwives, you understand that every patient's journey is unique, the reasons and needs of those entering the acute care setting are vast and often unpredictable.

As staff working within this setting, you are often required to think quickly and on the spot. As such, we have developed a program that will assist you in making these decisions confidently.

Over the day you will hear from industry experts discussing current topics and practice developments, as well as leaders in health care sharing evidence based research and leading policy.

While we are in the final stages of locking down the program, we wanted to give you a preview of what to expect from the day and encourage you to book early or risk missing out. Numbers are limited and **registrations close 11 October 2019.**

BOOK AS A GROUP & SAVE UP TO 20%*

DEALS:

Save 10% for a group of 5 or more
Save 20% for a group of 10 or more

COST:

General public: \$220
ANMF members: \$170 (save \$50)
Students: \$100 (save \$120)

PROGRAM PREVIEW

UNDERSTANDING THE JOURNEY OF AN ACUTE PATIENT

The importance of care trajectories are an emerging topic within health research due to improvements in care, disease management, and also expenditure. How do sequences of events and turning points individualise healthcare and provide medico-financial benefits and ease patient flow issues? During this extended session you will hear from first responders, paramedic services, patient flow managers and others involved in the patient journey.

BORN BEFORE ARRIVAL

This session is aimed at individuals working in medical settings where they may be in the position of caring for a woman in the late stages of labour. Participants will learn the skills and knowledge to care for both mother and baby, should the birth occur before the mother reaches the maternity unit. These skills can assist in situations ranging from in the emergency department right through to unplanned instances where medical treatment is not immediately available.

IDENTIFYING AND TREATING THE SIGNS OF DETERIORATION

In the acute care setting a patient's journey can change within seconds. How can you recognise the initial signs of deterioration and what interventions can you take? This session will help you identify and manage the situation at hand, giving you the skills to act confidently, quickly and appropriately to improve patient outcomes.

REGISTER ONLINE: ANMFTAS.ORG.AU/ACUTEHBT

Program is subject to change at the discretion of the ANMF/HERC.
